Personal Profile

I am a computer scientist with adverse skills in networking and software development, Java, JavaScript and it's React library, for front-end development and the Node.js for backend development.

I enjoy taking on real word problems and try to find a solution for them with the help of computers .I am always ready learn new technologies and I learn fast.

Achievements

- Bachelors degree in Computer Science
- Self taught JavaScript developer with knowledge in frameworks such as react.js and node.js
- Secured an attachment at Kenya Literature Bureau
- Developed web application with React. Js and Node Js
- Currently studing smart contracts and next.js the future of web 3.0

Education

[From 2018– To 2022]	Computer Science	Chuka University
Grade achieved:	Second Class honours	

[From 2013 – To 2017]	High School Education	Oololaiser High School
Grade achieved:	B	

Work Experience

[From 4-1-22– To date]	[freelancer]	[fiver and upwork]
-------------------------------	----------------------	---------------------------

Main duties performed: developed simple websites and applications, with languages such as Java for desktop and JavaScript for web, data mining assignments for students

From September 2021 – To December 2021

Attachment

KLB

Main duties performed: maintained the companies website, maintaining the network and the server.

Skills

Technical:

- Front-end developer with react.js and next.js
- Back-end developer with node.js
- Mongo-db for data storage
- Java for desktop application
- Network engineering
- Troubleshooting
- Unix operating system

Interpersonal:

- **social**
- **work under minimal supervision**
- **hardworking**

Other:

- learn fast

Hobbies and Interests

I enjoy taking on real word problems and try to find a solution for them with the help of software. From stating the requirements of solving the said problem to developing the required software or website especially with other smart developers. To challenge and give me new insights on how they would write their code.

I have a great interest in web development. Developing user friendly web applications that are fast and easy to use for the intended users. Once I discovered I could use JavaScript for both my front-end and back-end development I have taken it up to myself to try and fully understand how to use this powerful tool. I developed my final year project with this language using React.js and Node.js frameworks to develop an online e-commerce website.

Am also have a huge interest in blockchain technology and how it will take over the internet with the rise of smart contracts in web 3.0
